

Science of Hope Community of Practice

JULY 2026

Measuring Hope

Data, Outcomes, and Real-World Practice

About This Session

How do we know if HOPE-centered work is making a difference?

Join us for a practical conversation about data, outcomes, and hope science. This session will explore how organizations are capturing learning, stories, progress, and outcomes connected to HOPE-centered work.

What to Expect

This session will use a fishbowl-style conversation with community partners and researchers. Together, we'll explore real examples, lessons learned, and ways to make data feel useful instead of overwhelming.

In This Session, We Will Explore

- What it can look like to measure HOPE-centered work
- Different types of data, from simple feedback to deeper evaluation
- How stories and lived experience can help show impact
- How goals, pathways, and agency may show up in practice
- Small steps participants can take in their own roles or organizations

Why Attend

This session is for anyone interested in bringing HOPE into practice and better understanding how to notice, capture, and share impact. You do not need a formal data system or evaluation plan to attend. This conversation is meant to help you think about what is possible from where you are now.
